

## First-Ever Combined Glucose, BP Monitor

GenExel-Sein (Buffalo Grove, IL) has announced its launch of Duo-Care, the only combined blood glucose and wrist blood pressure monitor, according to the company. This product provides ease-of-use for simplified home monitoring of diabetes and blood pressure, and eliminates the inconvenience of purchasing and/or using two separate monitors.

Duo-Care's compact 2-in-1 design is engineered with performance enhancing technologies to deliver fast, accurate results. For blood glucose measurements, Duo-Care uses test strips combined with fast tracking temperature technology that provides accurate results in as little as 5 seconds with a small blood sample of only 0.5  $\mu$ L. The monitor automati-

cally stores 150 blood glucose values.

The comfortable wrist-type blood pressure monitor uses Advanced Oscillometric Algorithm technology that provides reliable and accurate measurements and compensates for vascular condition and cuff placement. In addition, Duo-Care uses step deflation to optimally control cuff deflation and compensate for irregular heartbeat. With a large, easy-to-read display, the wrist monitor has the capability to store and review up to 60 blood pressure measurements. For more information, please visit [www.duo-care.com](http://www.duo-care.com).

### Diabetic Compression Sock

EuroSocks North America (Warwick, RI) has introduced the Euro Rx Compression Diabetic sock. Developed by leading vascular and podiatric physicians, the new diabetic compression sock is designed to provide maximum comfort and protection for diabetics, with the added comfort and benefits of compression.

"EuroSocks was pleased to earlier unveil the Euro Rx for Diabetics, a crew sock offering a patented white bottom for diabetics to easily monitor the condition of their feet while at the same time not compromising fashion," said EuroSocks Chairman and CEO Alan M. Jacober. "Now we've expanded on that innovative dual tone technology—and are able to offer that same critical function—with an over the calf compression sock, that helps alleviate many of the symptoms commonly associated with circulation problems."

The constriction-free Euro Rx Compression Diabetic sock has the finest moisture management system available using Drystat fiber that has silver ions in the fibers that help control bacteria growth and minimize odors. Easy to put on and take off, Euro Rx Diabetic Compression Diabetic socks naturally help to stimulate blood flow, helping to reduce muscle fatigue and foot and leg swelling. They are available in three sizes and three choices of colors, for formal or casual attire, in constriction free crew and compression diabetic. All feature white soles, to allow the wearer to visually monitor foot secretions throughout the day. For more information, please visit [www.eurosock.com](http://www.eurosock.com).

### Wearable Body Monitoring System

BodyMedia (Pittsburgh, PA) has introduced the SenseWear Body Monitoring System. The convenient moni-

toring system acts as a metabolic wearable monitor, allowing physicians to collect and analyze accurate metabolic physical activity and lifestyle information about patients in a free-living context.

The system includes the SenseWear armband, a comfortable, clinically-validated device that is worn on the back of the upper arm. The armband continuously records an array of physiological data. The collected data is then analyzed and organized into graphs and reports that clearly display the patients' energy expenditure, duration and level of physical activity, number of steps taken, and sleep/wake states.

For more informaton, please visit [www.bodymedia.com/main.jsp](http://www.bodymedia.com/main.jsp).

### GlucoBurst Glucose Tablets

PBM Products, LLC (Gordonsville, VA) has introduced GlucoBurst Glucose Tablets. The American Diabetes Association (ADA) recommends carrying something containing 15 grams of glucose at all times in order to treat hypoglycemic reactions. Even though hypoglycemic reactions can occur suddenly, glucose levels can be brought back to normal by eating or drinking carbohydrates.

GlucoBurst Glucose Tablets are specially designed for people with diabetes and/or mild hypoglycemia and complement GlucoBurst Glucose Gel, which delivers 15 grams of liquid glucose. Unlike most other glucose tablets that offer only four grams of glucose, GlucoBurst Glucose Tablets deliver five grams of glucose in nine-count and 24-count sizes. Offered in Sour Apple and Sour Cherry flavors, just three tablets provide the ADA-recommended 15 grams of glucose. GlucoBurst products are available at leading retail locations nationwide. For more information, please visit [www.gluco-burst.com](http://www.gluco-burst.com). ■
